Notes and Potential Issues

The following notes and warnings highlight missing or conflicting information which

caused the validator to perform some guesswork prior to validation, or other things affecting the output below. If the guess or fallback is incorrect, it could make validation results entirely incoherent. It is *highly recommended* to check these potential issues, and, if necessary, fix them and re-validate the document.

No Character Encoding Found! Falling back to UTF-8.

None of the standards sources gave any information on the character encoding labeling for this document. Without encoding information it is impossible to reliably validate the document. As a fallback solution, the "UTF-8" encoding was used to read the content and attempt to perform the validation, but this is likely to fail for all non-trivial documents.

Read the [FAQ entry on character encoding](#) for more details and pointers on how to fix this problem with your document.

No Character encoding declared at document level

No character encoding information was found within the document, either in an HTML `meta` element or an XML declaration. It is often recommended to declare the character encoding in the document itself, especially if there is a chance that the document will be read from or saved to disk, CD, etc.

See [this tutorial on character encoding](#) for techniques and explanations.

Validation Output: 125 Errors

Line 38, Column 76: there is no attribute "class"

```
...lns="http://www.w3.org/1999/xhtml" class="no-js" lang="es-CO"> <!--<![endif]-->
```

You have used the attribute named above in your document, but the document type you are using does not support that attribute for this element. This error is often caused by incorrect use of the "Strict" document type with a document that uses frames (e.g. you must use the "Transitional" document type to get the "target" attribute), or by using vendor proprietary extensions such as "marginheight" (this is usually fixed by using CSS to achieve the desired effect instead).

This error may also result if the element itself is not supported in the document type you are using, as an undefined element will have no supported attributes; in this case, see the element-undefined error message for further information.

How to fix: check the spelling and case of the element and attribute, (Remember XHTML

is all lower-case) and/or check that they are both allowed in the chosen document type, and/or use CSS instead of this attribute. If you received this error when using the `<embed>` element to incorporate flash media in a Web page, see the [FAQ item on valid flash](#).

 Line 41, Column 24: there is no attribute "charset"

```
<meta charset="utf-8" http-equiv="Content-Type" content="text/html">
```

You have used the attribute named above in your document, but the document type you are using does not support that attribute for this element. This error is often caused by incorrect use of the "Strict" document type with a document that uses frames (e.g. you must use the "Transitional" document type to get the "target" attribute), or by using vendor proprietary extensions such as "marginheight" (this is usually fixed by using CSS to achieve the desired effect instead).

This error may also result if the element itself is not supported in the document type you are using, as an undefined element will have no supported attributes; in this case, see the element-undefined error message for further information.

How to fix: check the spelling and case of the element and attribute, (Remember XHTML is all lower-case) and/or check that they are both allowed in the chosen document type, and/or use CSS instead of this attribute. If you received this error when using the `<embed>` element to incorporate flash media in a Web page, see the [FAQ item on valid flash](#).

```
<meta name="rating" content="general">
```

You may have neglected to close an element, or perhaps you meant to "self-close" an element, that is, ending it with ">" instead of ">".

 **Line 55, Column 10: start tag was here**

```
<meta name="rating" content="general">
```

 Line 56, Column 161: cannot generate system identifier for general entity "D"

... innovación, research, development, R&D+di, proyectos, projects, ingeniería, e...

An entity reference was found in the document, but there is no reference by that name defined. Often this is caused by misspelling the reference name, unencoded ampersands, or by leaving off the trailing semicolon (;). **The most common cause of this error is unencoded ampersands in URLs** as described by the [WDG](#) in "[Ampersands in URLs](#)".

Entity references start with an ampersand (&) and end with a semicolon (;). If you want to use a literal ampersand in your document you must encode it as "&" (*even inside URLs!*). Be careful to end entity references with a semicolon or your entity reference may get interpreted in connection with the following text. Also keep in mind that named entity references are case-sensitive; &Aelig; and æ are different characters.

If this error appears in some markup generated by PHP's session handling code, [this article](#) has explanations and solutions to your problem.

Note that in most documents, errors related to entity references will trigger up to 5 separate messages from the Validator. Usually these will all disappear when the original problem is fixed.

 Line 56, Column 161: general entity "D" not defined and no default entity

... innovación, research, development, R&D+di, proyectos, projects, ingeniería, e...

This is usually a cascading error caused by a an undefined entity reference or use of an unencoded ampersand (&) in a URL or body text. See the previous message for further details.

 Line 56, Column 162: reference not terminated by REFC delimiter

...innovación, research, development, R&D+di, proyectos, projects, ingeniería, en...

If you meant to include an entity that starts with "&", then you should terminate it with ";". Another reason for this error message is that you inadvertently created an entity by failing to escape an "&" character just before this text.

 Line 56, Column 162: reference to external entity in attribute value

...innovación, research, development, R&D+di, proyectos, projects, ingeniería, en...

This is generally the sign of an ampersand that was not properly escaped for inclusion in an attribute, in a href for example. You will need to escape all instances of '&' into '&'.

 Line 56, Column 162: reference to entity "D" for which no system identifier

could be generated

...innovación, research, development, R&D+di, proyectos, projects, ingeniería, en...

This is usually a cascading error caused by a an undefined entity reference or use of an unencoded ampersand (&) in an URL or body text. See the previous message for further details.

 **Line 56, Column 160:** entity was defined here

..., innovación, research, development, R & D+di, proyectos, projects, ingeniería, ...

✖ Line 128, Column 10: invalid comment declaration: found character "<" outside comment but inside comment declaration

```
<link rel="stylesheet" type="text/css" media="all" href="/Albrand/styl...
```

Check that you are using a proper syntax for your comments, e.g: `<!-- comment here -->`. This error may appear if you forget the last `--` to close one comment, and later open another.

i Line 125, Column 10: comment declaration started here

```
<!-- DELETE THIS 2 <link> ELEMENTS ONCE ALL DESIGN IS COMPLETE!
```

✖ Line 128, Column 11: character data is not allowed here

```
<link rel="stylesheet" type="text/css" media="all" href="/Albrand/styl...
```

You have used character data somewhere it is not permitted to appear. Mistakes that can cause this error include:

- putting text directly in the body of the document without wrapping it in a container element (such as a `<p>aragraph</p>`), or
- forgetting to quote an attribute value (where characters such as `"%` and `'` are common, but cannot appear without surrounding quotes), or
- using XHTML-style self-closing tags (such as `<meta ... />`) in HTML 4.01 or earlier. To fix, remove the extra slash (`'`) character. For more information about the reasons for this, see [Empty elements in SGML, HTML, XML, and XHTML](#).

 Line 129, Column 120: end tag for "link" omitted, but OMITTAG NO was specified

...tps://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.0.0-beta3/css/all.min.css" >

You may have neglected to close an element, or perhaps you meant to "self-close" an element, that is, ending it with ">" instead of ">".

 Line 129, Column 10: start tag was here

<link rel="stylesheet" href="https://cdnjs.cloudflare.com/ajax/libs/fo...

 Line 138, Column 83: required attribute "type" not specified

...ipt src="https://forma1.pro/Albrand/scripts/libs/modernizr-custom.js" ></script>

The attribute given above is required for an element that you've used, but you have omitted it. For instance, in most HTML and XHTML document types the "type" attribute is required on the "script" element and the "alt" attribute is required for the "img" element.

Typical values for type are type="text/css" for <style> and type="text/javascript" for <script>.

 Line 148, Column 21: there is no attribute "id"

<header id=" appMainHeader">

You have used the attribute named above in your document, but the document type you are using does not support that attribute for this element. This error is often caused by incorrect use of the "Strict" document type with a document that uses frames (e.g. you must use the "Transitional" document type to get the "target" attribute), or by using vendor proprietary extensions such as "marginheight" (this is usually fixed by using CSS to achieve the desired effect instead).

This error may also result if the element itself is not supported in the document type you are using, as an undefined element will have no supported attributes; in this case, see the element-undefined error message for further information.

How to fix: check the spelling and case of the element and attribute, (Remember XHTML is all lower-case) and/or check that they are both allowed in the chosen document type, and/or use CSS instead of this attribute. If you received this error when using the <embed> element to incorporate flash media in a Web page, see the [FAQ item on valid flash](#).

 Line 148, Column 36: element "header" undefined

```
<header id="appMainHeader" >
```

You have used the element named above in your document, but the document type you are using does not define an element of that name. This error is often caused by:

- incorrect use of the "Strict" document type with a document that uses frames (e.g. you must use the "Frameset" document type to get the "<frameset>" element),
- by using vendor proprietary extensions such as "<spacer>" or "<marquee>" (this is usually fixed by using CSS to achieve the desired effect instead).
- by using upper-case tags in XHTML (in XHTML attributes and elements must be all lower-case).

 Line 149, Column 22: syntax of attribute value does not conform to declared value

```
<div id=" " class="appContainer">
```

The value of an attribute contained something that is not allowed by the specified syntax for that type of attribute. For instance, the "selected" attribute must be either minimized as "selected" or spelled out in full as "selected="selected>"; the variant "selected=" " is not allowed.

 Line 150, Column 24: there is no attribute "id"

```
<nav id=" appNavigator" class=" ">
```

You have used the attribute named above in your document, but the document type you are using does not support that attribute for this element. This error is often caused by incorrect use of the "Strict" document type with a document that uses frames (e.g. you must use the "Transitional" document type to get the "target" attribute), or by using vendor proprietary extensions such as "marginheight" (this is usually fixed by using CSS to achieve the desired effect instead).

This error may also result if the element itself is not supported in the document type you are using, as an undefined element will have no supported attributes; in this case, see the element-undefined error message for further information.

How to fix: check the spelling and case of the element and attribute, (Remember XHTML is all lower-case) and/or check that they are both allowed in the chosen document type, and/or use CSS instead of this attribute.  Line 199, Column 65: document type does not allow element "div" here; missing one of "button", "map", "object", "ins", "del", "noscript" start-tag

```
<div class="app_img_item_my_settings" > </div>
```

The mentioned element is not allowed to appear in the context in which you've placed it; the other mentioned elements are the only ones that are both allowed there *and* can contain the element mentioned. This might mean that you need a containing element, or possibly that you've forgotten to close a previous element.

One possible cause for this message is that you have attempted to put a block-level element (such as "<p>" or "<table>") inside an inline element (such as "<a>", "", or "").

 Line 200, Column 64: document type does not allow element "div" here; missing one of "button", "map", "object", "ins", "del", "noscript" start-tag

```
<div class="app_item_desc_container" >
```

The mentioned element is not allowed to appear in the context in which you've placed it; the other mentioned elements are the only ones that are both allowed there *and* can contain the element mentioned. This might mean that you need a containing element, or possibly that you've forgotten to close a previous element.

One possible cause for this message is that you have attempted to put a block-level element (such as "<p>" or "<table>") inside an inline element (such as "<a>", "", or "").

❌ **Line 205, Column 32: syntax of attribute value does not conform to declared value**

```
<a id=" " class="appItem" href="/changepassword">
```

The value of an attribute contained something that is not allowed by the specified syntax for that type of attribute. For instance, the "selected" attribute must be either minimized as "selected" or spelled out in full as "selected="selected"; the variant "selected=" " is not allowed.

❌ **Line 206, Column 69: document type does not allow element "div" here; missing one of "button", "map", "object", "ins", "del", "noscript" start-tag**

```
<div class="app_img_item_profile_manager" > </div>
```

The mentioned element is not allowed to appear in the context in which you've placed it; the other mentioned elements are the only ones that are both allowed there *and* can contain the element mentioned. This might mean that you need a containing element, or possibly that you've forgotten to close a previous element.

One possible cause for this message is that you have attempted to put a block-level element (such as "<p>" or "<table>") inside an inline element (such as "<a>", "", or "").

❌ **Line 207, Column 64: document type does not allow element "div" here; missing one of "button", "map", "object", "ins", "del", "noscript" start-tag**

```
<div class="app_item_desc_container" >
```

The mentioned element is not allowed to appear in the context in which you've placed it; the other mentioned elements are the only ones that are both allowed there *and* can contain the element mentioned. This might mean that you need a containing element, or possibly that you've forgotten to close a previous element.

One possible cause for this message is that you have attempted to put a block-level element (such as "<p>" or "<table>") inside an inline element (such as "<a>", "", or "").

❌ **Line 225, Column 21: there is no attribute "id"**

```
<footer id=" appMainFooter">
```

You have used the attribute named above in your document, but the document type you are using does not support that attribute for this element. This error is often caused by incorrect use of the "Strict" document type with a document that uses frames (e.g. you must use the "Transitional" document type to get the "target" attribute), or by using vendor proprietary extensions such as "marginheight" (this is usually fixed by using CSS to achieve the desired effect instead).

This error may also result if the element itself is not supported in the document type you are using, as an undefined element will have no supported attributes; in this case, see the element-undefined error message for further information.

How to fix: check the spelling and case of the element and attribute, (Remember XHTML is all lower-case) and/or check that they are both allowed in the chosen document type, and/or use CSS instead of this attribute. If you received this error when using the `<embed>` element to incorporate flash media in a Web page, see the [FAQ item on valid flash](#).

Line 225, Column 36: element "footer" undefined

```
<footer id="appMainFooter" >
```

You have used the element named above in your document, but the document type you are using does not define an element of that name. This error is often caused by:

- incorrect use of the "Strict" document type with a document that uses frames (e.g. you must use the "Frameset" document type to get the "`<frameset>`" element),
- by using vendor proprietary extensions such as "`<spacer>`" or "`<marquee>`" (this is usually fixed by using CSS to achieve the desired effect instead).
- by using upper-case tags in XHTML (in XHTML attributes and elements must be all lower-case).

Line 230, Column 136: there is no attribute "property"

```
...iedad intelectual de esta <a property="dct:title" rel="cc:attributionURL" href...
```

You have used the attribute named above in your document, but the document type you are using does not support that attribute for this element. This error is often caused by incorrect use of the "Strict" document type with a document that uses frames (e.g. you must use the "Transitional" document type to get the "target" attribute), or by using vendor proprietary extensions such as "marginheight" (this is usually fixed by using CSS to achieve the desired effect instead).

This error may also result if the element itself is not supported in the document type you are using, as an undefined element will have no supported attributes; in this case, see the element-undefined error message for further information.

How to fix: check the spelling and case of the element and attribute, (Remember XHTML is all lower-case) and/or check that they are both allowed in the chosen document type, and/or use CSS instead of this attribute. If you received this error when using the `<embed>` element to incorporate flash media in a Web page, see the [FAQ item on valid flash](#).

Line 230, Column 880: end tag for "img" omitted, but OMITTAG NO was specified

...t/icons/cc.svg?ref=chooser-v1" alt=""><img style="height:18px!important;margin...

You may have neglected to close an element, or perhaps you meant to "self-close" an element, that is, ending it with ">" instead of ">".

 **Line 231, Column 27: start tag was here**

```
<p><br/></script>
```

The attribute given above is required for an element that you've used, but you have omitted it. For instance, in most HTML and XHTML document types the "type" attribute is required on the "script" element and the "alt" attribute is required for the "img" element.

Typical values for type are type="text/css" for <style> and type="text/javascript" for <script>.

 **Line 245, Column 17: required attribute "type" not specified**

```
<script>window.dataLayer = window.dataLayer || [];function gtag(){data...
```

The attribute given above is required for an element that you've used, but you have omitted it. For instance, in most HTML and XHTML document types the "type" attribute is required on the "script" element and the "alt" attribute is required for the "img" element.

Typical values for type are type="text/css" for <style> and type="text/javascript" for <script>.

 **Line 248, Column 84: there is no attribute "crossorigin"**

```
... src="https://forma1.pro/Albrand/scripts/UX.4.47.0.js" crossorigin=""></script>
```

You have used the attribute named above in your document, but the document type you are using does not support that attribute for this element. This error is often caused by incorrect use of the "Strict" document type with a document that uses frames (e.g. you must use the "Transitional" document type to get the "target" attribute), or by using vendor proprietary extensions such as "marginheight" (this is usually fixed by using CSS to achieve the desired effect instead).

This error may also result if the element itself is not supported in the document type you

are using, as an undefined element will have no supported attributes; in this case, see the element-undefined error message for further information.

How to fix: check the spelling and case of the element and attribute, (Remember XHTML is all lower-case) and/or check that they are both allowed in the chosen document type, and/or use CSS instead of this attribute. If you received this error when using the `<embed>` element to incorporate flash media in a Web page, see the [FAQ item on valid flash](#).

Line 248, Column 86: required attribute "type" not specified

```
... src="https://forma1.pro/Albrand/scripts/UX.4.47.0.js" crossorigin="" ></script>
```

The attribute given above is required for an element that you've used, but you have omitted it. For instance, in most HTML and XHTML document types the "type" attribute is required on the "script" element and the "alt" attribute is required for the "img" element.

Typical values for type are type="text/css" for `<style>` and type="text/javascript" for `<script>`.

Line 249, Column 17: required attribute "type" not specified

```
<script>window.jQuery || document.write('<script src="//ajax.googleapi...
```

The attribute given above is required for an element that you've used, but you have omitted it. For instance, in most HTML and XHTML document types the "type" attribute is required on the "script" element and the "alt" attribute is required for the "img" element.

Typical values for type are type="text/css" for `<style>` and type="text/javascript" for `<script>`.

Line 249, Column 123: required attribute "type" not specified

```
...jax.googleapis.com/ajax/libs/jquery/3.7.1/jquery.min.js"></script>');</script>
```

The attribute given above is required for an element that you've used, but you have omitted it. For instance, in most HTML and XHTML document types the "type" attribute is required on the "script" element and the "alt" attribute is required for the "img" element.

Typical values for type are type="text/css" for `<style>` and type="text/javascript" for `<script>`.

Line 249, Column 123: document type does not allow element "script" here

```
...jax.googleapis.com/ajax/libs/jquery/3.7.1/jquery.min.js"></script>');</script>
```

The element named above was found in a context where it is not allowed. This could

mean that you have incorrectly nested elements -- such as a "style" element in the "body" section instead of inside "head" -- or two elements that overlap (which is not allowed).

One common cause for this error is the use of XHTML syntax in HTML documents. Due to HTML's rules of implicitly closed elements, this error can create cascading effects. For instance, using XHTML's "self-closing" tags for "meta" and "link" in the "head" section of a HTML document may cause the parser to infer the end of the "head" section and the beginning of the "body" section (where "link" and "meta" are not allowed; hence the reported error).

 Line 249, Column 124: character "<" is the first character of a delimiter but occurred as data

`...jax.googleapis.com/ajax/libs/jquery/3.7.1/jquery.min.js"><\/script>');</script>`

This message may appear in several cases:

- You tried to include the "<" character in your page: you should escape it as "<";
- You used an unescaped ampersand "&": this may be valid in some contexts, but it is recommended to use "&", which is always safe.
- Another possibility is that you forgot to close quotes in a previous tag.

 Line 250, Column 17: required attribute "type" not specified

`<script>"use strict";Core.utils.onAllowCookieTracking(function () {con...`

The attribute given above is required for an element that you've used, but you have omitted it. For instance, in most HTML and XHTML document types the "type" attribute is required on the "script" element and the "alt" attribute is required for the "img" element.

Typical values for type are type="text/css" for <style> and type="text/javascript" for <script>.

 Line 250, Column 17: document type does not allow element "script" here

`<script>"use strict";Core.utils.onAllowCookieTracking(function () {con...`

The element named above was found in a context where it is not allowed. This could mean that you have incorrectly nested elements -- such as a "style" element in the "body" section instead of inside "head" -- or two elements that overlap (which is not allowed).

One common cause for this error is the use of XHTML syntax in HTML documents. Due to HTML's rules of implicitly closed elements, this error can create cascading effects. For instance, using XHTML's "self-closing" tags for "meta" and "link" in the "head" section of a HTML document may cause the parser to infer the end of the "head" section and the beginning of the "body" section (where "link" and "meta" are not allowed; hence the reported error).

✖ Line 253, Column 66: required attribute "type" not specified

```
<script src="https://forma1.pro/Albrand/scripts/main.js" ></script>
```

The attribute given above is required for an element that you've used, but you have omitted it. For instance, in most HTML and XHTML document types the "type" attribute is required on the "script" element and the "alt" attribute is required for the "img" element.

Typical values for type are type="text/css" for <style> and type="text/javascript" for <script>.

✖ Line 253, Column 66: document type does not allow element "script" here

```
<script src="https://forma1.pro/Albrand/scripts/main.js" ></script>
```

The element named above was found in a context where it is not allowed. This could mean that you have incorrectly nested elements -- such as a "style" element in the "body" section instead of inside "head" -- or two elements that overlap (which is not allowed).

One common cause for this error is the use of XHTML syntax in HTML documents. Due to HTML's rules of implicitly closed elements, this error can create cascading effects. For instance, using XHTML's "self-closing" tags for "meta" and "link" in the "head" section of a HTML document may cause the parser to infer the end of the "head" section and the beginning of the "body" section (where "link" and "meta" are not allowed; hence the reported error).

✖ Line 254, Column 24: the name and VI delimiter can be omitted from an attribute specification only if SHORTTAG YES is specified

```
<script defer s rc="resources/src/js/plugins.js"></script>
```

"VI delimiter" is a technical term for the equal sign. This error message means that the name of an attribute and the equal sign cannot be omitted when specifying an attribute. A common cause for this error message is the use of "Attribute Minimization" in document types where it is not allowed, in [XHTML](#) for instance.

How to fix: For attributes such as compact, checked or selected, do not write e.g <option selected ... but rather <option selected="selected" ...

✖ Line 254, Column 57: required attribute "type" not specified

```
<script defer src="resources/src/js/plugins.js" ></script>
```

The attribute given above is required for an element that you've used, but you have omitted it. For instance, in most HTML and XHTML document types the "type" attribute is required on the "script" element and the "alt" attribute is required for the "img" element.

Typical values for type are type="text/css" for <style> and type="text/javascript" for

<script>.

 Line 254, Column 57: document type does not allow element "script" here

```
<script defer src="resources/src/js/plugins.js" ></script>
```

The element named above was found in a context where it is not allowed. This could mean that you have incorrectly nested elements -- such as a "style" element in the "body" section instead of inside "head" -- or two elements that overlap (which is not allowed).

One common cause for this error is the use of XHTML syntax in HTML documents. Due to HTML's rules of implicitly closed elements, this error can create cascading effects. For instance, using XHTML's "self-closing" tags for "meta" and "link" in the "head" section of a HTML document may cause the parser to infer the end of the "head" section and the beginning of the "body" section (where "link" and "meta" are not allowed; hence the reported error).

 Line 255, Column 24: the name and VI delimiter can be omitted from an attribute specification only if SHORTTAG YES is specified

```
<script defer s rc="resources/src/js/script.js"></script>
```

"VI delimiter" is a technical term for the equal sign. This error message means that the name of an attribute and the equal sign cannot be omitted when specifying an attribute. A common cause for this error message is the use of "Attribute Minimization" in document types where it is not allowed, in [XHTML](#) for instance.

How to fix: For attributes such as compact, checked or selected, do not write e.g <option selected ... but rather <option selected="selected" ...

 Line 255, Column 56: required attribute "type" not specified

```
<script defer src="resources/src/js/script.js" ></script>
```

The attribute given above is required for an element that you've used, but you have omitted it. For instance, in most HTML and XHTML document types the "type" attribute is required on the "script" element and the "alt" attribute is required for the "img" element.

Typical values for type are type="text/css" for <style> and type="text/javascript" for <script>.

 Line 255, Column 56: document type does not allow element "script" here

```
<script defer src="resources/src/js/script.js" ></script>
```

The element named above was found in a context where it is not allowed. This could mean that you have incorrectly nested elements -- such as a "style" element in the "body"

section instead of inside "head" -- or two elements that overlap (which is not allowed).

One common cause for this error is the use of XHTML syntax in HTML documents. Due to HTML's rules of implicitly closed elements, this error can create cascading effects. For instance, using XHTML's "self-closing" tags for "meta" and "link" in the "head" section of a HTML document may cause the parser to infer the end of the "head" section and the beginning of the "body" section (where "link" and "meta" are not allowed; hence the reported error).

 **Line 268, Column 10: end tag for "script" omitted, but OMITTAG NO was specified**

```
</body>
```

You may have neglected to close an element, or perhaps you meant to "self-close" an element, that is, ending it with ">" instead of ">".
